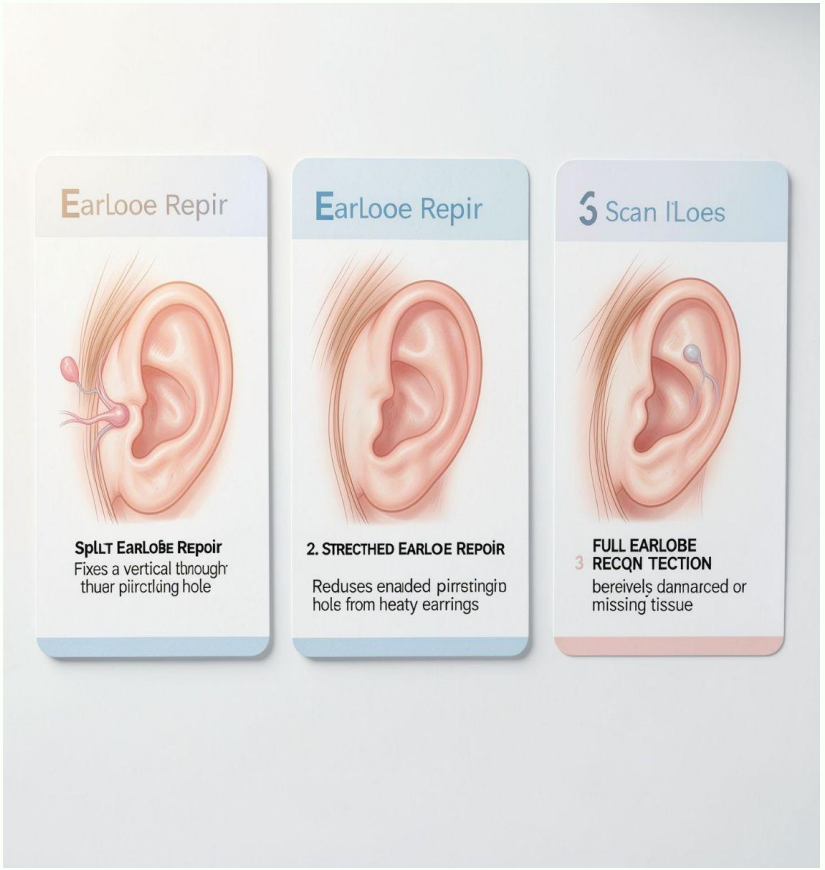
UNDERSTANDING THE PROCEDURE

What Is Earlobe Repair?

Earlobe repair – also known as split earlobe repair, torn earlobe surgery, or earlobe reconstruction – is a minor cosmetic procedure that restores a torn, stretched, or elongated earlobe to its natural shape.

Performed under local anesthesia, the procedure typically takes 30 - 60 minutes per ear. Results are immediate, with minimal scarring and a quick recovery.



Earlooe Repir
Earlooe Repir
Scan lLoes
Splıt Earlobe Repoir
Fixes a vertical tnough thuer pirctlıng hole
2. STRECTHED EARLOE REPOIR
Reduses enaded pirrstingio hole from heaty earrings
FULL EARLOBE RECQN TECTION
bereivels dannarced or missing tissue

Our minimally invasive technique promotes faster healing with minimal visible scarring.

Most patients return to normal activities within 24 - 48 hours.

COMMON CAUSES

How Earlobe Damage Happens

Heavy Earrings

Long-term wear of heavy or dangling earrings gradually stretches and thins the piercing hole.

Accidental Trauma

Earrings snagged on clothing, hair, or grabbed by children can cause sudden, painful tears.

Gauge Stretching

Intentional stretching for gauges can leave permanently enlarged holes requiring surgical closure.

Aging & Skin Changes

Loss of collagen and skin elasticity over time weakens earlobe tissue, making it more prone to tearing.

TYPES OF DAMAGE

Recognizing Your Earlobe Condition

Types of Earlobe Damage
Cross-sectional Anatomy and Common Types of Injury
Normal Earlobe
Partial Tear
Complete Tear
Stretched Earlobe
Torn or Gauged Earlobe
Intact earlobe with normal structure and tissue
Incomplete tear of the earlobe
Full-thickness tear separating the earlobe into two parts
Elongation and thinning of the earlobe due to prolonged stretching
Severe tearing or gauging causing irregular tissue damage

Partial Split

A tear beginning at the piercing hole but not extending through the full lobe.

Complete Split

A full-thickness tear dividing the earlobe into two separate sections.

Elongated Piercing

A stretched, oval-shaped hole caused by prolonged heavy earring wear.

Multiple Piercing Damage

Wear and tear across several piercing sites, often requiring layered repair.

THE PROCEDURE

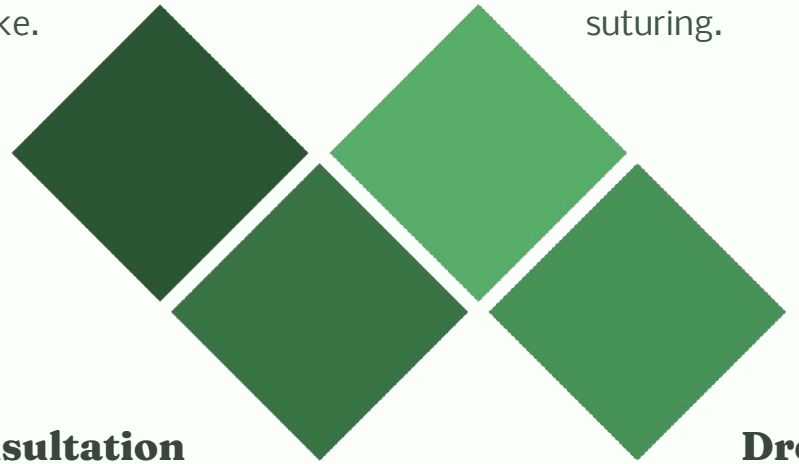
Step-by-Step Repair Process

Local Anesthesia

Numbing injection; patient awake.

Surgical Repair

Precise closure, reshaping, suturing.



Consultation

Medical history and earlobe exam.

Dressing & Discharge

Sterile bandage and aftercare instructions.

Our streamlined approach ensures a safe, comfortable experience with visible results from day one. Most procedures are completed in under an hour with no overnight stay required.

RECOVERY

Your Recovery Timeline

Day 1–2

Mild swelling and tenderness. Rest and keep the area clean and dry.

1

Day 3–7

Sutures dissolve or are removed. Light activities can resume.

2

Week 2

Most swelling subsides. Gentle cleansing and moisturizing begin.

3

Week 4–6

Full healing achieved. Re-piercing can be performed if desired.

4

Month 3+

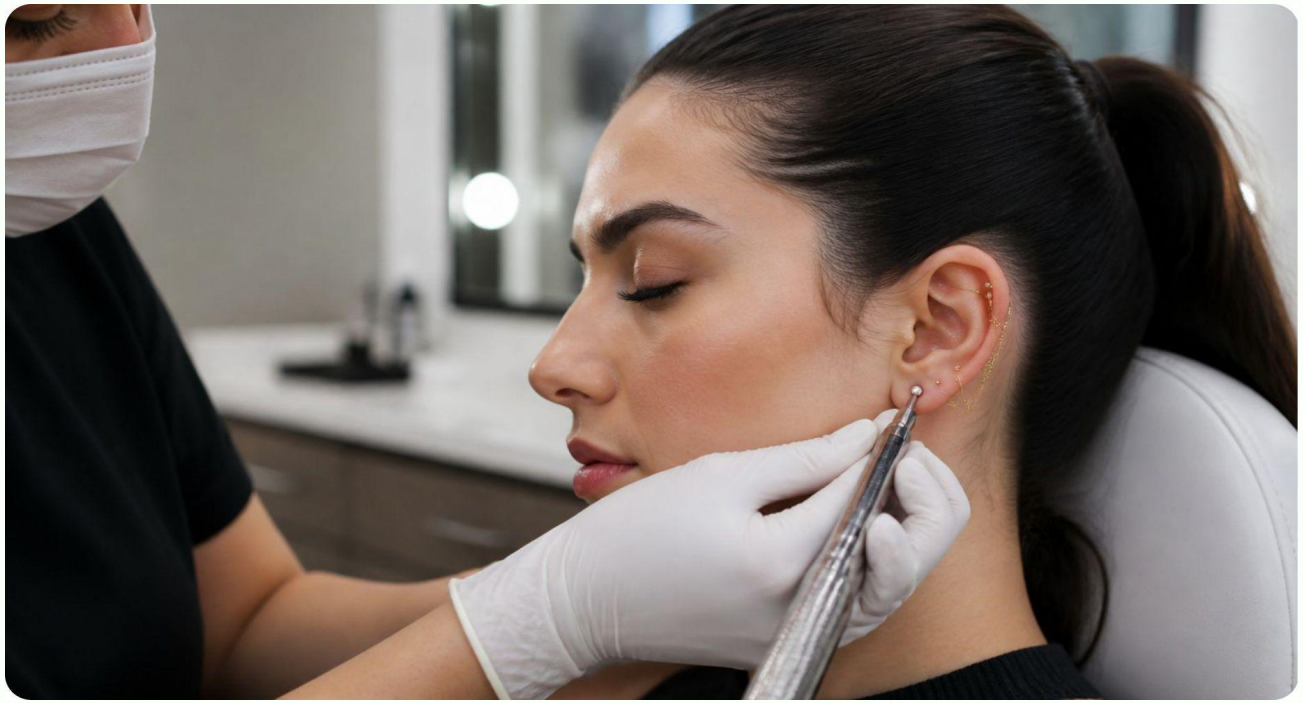
Final results visible. Scar tissue softens and fades naturally.

5

Follow your personalized aftercare plan for best results. Your care team is available throughout your recovery.

PIERCING SERVICES

Professional Ear Piercing



Once your earlobe has fully healed, our **certified piercing specialists** can create beautiful, precisely placed new piercings using sterile, medical-grade equipment.

All piercings are performed with hypoallergenic jewelry and full aftercare guidance included.

Lobe Piercing

Cartilage Piercing

Multiple Piercings

Re-Piercing Post-Repair

AFTERCARE & FAQS

Caring for Your Results

Essential Aftercare Steps

- Keep the area clean and dry for the first 48 hours
- Apply prescribed antibiotic ointment twice daily
- Avoid heavy earrings for at least 6 weeks
- Sleep on your back to reduce pressure on the earlobe
- Attend your follow-up appointment as scheduled

Is the procedure painful?

Local anesthesia ensures minimal discomfort. Most patients report only mild pressure.

Will there be visible scarring?

Scars are typically faint and fade significantly within 3-6 months.

Can I re-pierce my earlobe?

Yes – re-piercing is safe after 4-6 weeks of full healing.
